Oath/Declaration

The oath/declaration filed on 9/11/03 is acceptable.

Claims 1-33 are pending. Claims 8, 10, 26, 28, 31, and 32 have been amended in preliminary amendment.

Specification

The specification has been checked to the extent necessary to determine the presence of all possible minor errors. However, the applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-11 and 26-33 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over **claim 1 of U.S. Patent Serial No. 6685080**. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to one of ordinary skill in the art at the time of the invention was made that the at least one solder ball to be extracted from the attachment site is a defective solder ball, and the another solder ball to be replaced into the attachment site is non-defective ball, and the non-defective ball is held in place with the capillary tube while bonding the non-defective ball to the attachment site since claim 1 of **U.S. Patent Serial No. 6685080** taught that the non-defective ball is placed in the vacated attachment site with the capillary tube.

Claims 12-25 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over **claims 14, 15, and 18 of U.S. Patent Serial No. 6685080**. Although the conflicting claims are not identical, they are not

patentably distinct from each other because all limitations of the independent claims in present application are included in claims 14, 15, 18 of **U.S. Patent Serial No. 6685080.**

When responding to the office action, Applicants' are advice to provide the examiner with the line numbers and page numbers in the application and/or references cited to assist the examiner to locate the appropriate paragraphs.
